Features

Mercury's Low Jitter Differential VCXO, with low current consumption (54 mA for LVPECL 622.080 MHz at 3.3V) & an integrated phase jitter performance of 0.6 ps RMS. Gaining its precision frequency control market position by providing engineers with few-day samples for prototypes and low cost, fast delivery for volume production. The perfect solution to replace traditional XO's & VCXO's that use a more expensive, high frequency, fundamental crystal and a noisy PLL multiplier circuit.
